UX • Zainab ABADI

APPROACH

Overall work process

Collaboration with the team

WORKFLOWS IN WHICH UX IS INVOLVED IN SHORTCUT

PROCESSES

1- Evaluate what we have

2- Document what we have

3 - Do specific case studies on Shortcut

4- First approach of a new feature to implement

METHODS

(Indication of the main methods used in the different process for additional information)

Approach

User experience (UX) is the relationship between a product and the person using it. UX design focuses on building products that someone can easily use and enjoy using.

UX Design Process

Overall work process

Goals_ What do we want?

Questions_ What is our focus?

Exploring the UX research data
Generating initial codes
Looking for themes
Reviewing themes
Defining themes
Compiling a UX deliverable (report)

Collaboration with the team

WORKFLOWS IN WHICH UX IS INVOLVED IN SHORTCUT

UX involvement in a dev sprint

Regardless of the ticket structure used, UX work needs to be visible to the rest of the development team to ensure that research and design tasks are not skipped. Participating in sprint planning helps to keep the team aligned and informed about what UX will do during the sprint. This approach can help the engineering-team and product-team members recognize the rigor that goes into the design and research process.

The 5D Design Process

In order to improve the way the Design Team works and collaborates. To avoid bottlenecks, time-consuming re-work and last-minute adjustments. As well as to make sure that the projects stay on track and on time. This is a problem-focused flow based on a scalable and repeatable framework. It helps to optimize everyone's job and focus better on what the user wants only, by a first problem statement called story.

PROCESSES

① ② ③ ④

Definition of our own UX processes

The UX design process can be divided into four key phases: user research, design, testing, and implementation. It's important to note that UX is an iterative process.

WHAT?

Evaluate what we have.

WHY?

Optimize a process = document the flow, check real insights of the users, evaluate the real experience. If needed, to look for solutions to relevant pain points.

Phase 1	- In depth flowchart (dynamic UML diagrams) - Synthetized flowchart
Phase 2	- Empathy map (general) - User Persona (conclusions of general) - Specific Case Study (MVPs) -> Empathy map + User Persona - Notes
Mix of phase 1 and 2	- Experience Map Pain Points + Opportunities -> Prioritize + see possible growth opportunities. - Opportunities diagram -> find the solution

Task analysis + interaction overview (interface or user) + activities.
Get to know our user + What is the general experience with our design.

Flowchart: sequence of tasks for evaluating the process. There is one with more information about the behavior, and another that sticks only to the tasks.

Empathy map: visualization tool that allows to see who are the users. It also helps to organize insights in different sections, as what the users sees, feels or says.

User persona: archetypical user whose goals and characteristics represent the needs of a larger group of users. It also includes behavior patterns, goals, skills, attitudes, and background information, as well as the environment in which a persona operates.

Specific case study: empathy map and user persona of a user that would have a special interest. As a Most Valuable Player.

Experience map: visualization of an entire end-to-end experience that a “generic” person goes through in order to accomplish a goal.

Opportunities diagram: variant of swimlane diagram which highlights non-value-added (NVA) steps, separating them in from value-added (VA) steps using two swim lanes. The proportion and type of NVA steps reveal important information about the improvements that should be considered.

Flowchart: <https://www.casestudy.club/journal/ux-flowchart>

Empathy map: <https://www.nngroup.com/articles/empathy-mapping/>

User persona: <https://xd.adobe.com/ideas/process/user-research/putting-personas-to-work-in-ux-design/>

Specific case study:

<https://www.nngroup.com/articles/ux-mapping-cheat-sheet/#:~:text=Definition%3A%20An%20experience%20map%20is,a%20specific%20business%20or%20product.>

Opportunities diagram: <https://online.visual-paradigm.com/knowledge/six-sigma/opportunity-flowchart/>

WHAT?

Document what we have + make a descriptive analysis of the interface and the flow + evaluate the emotional impact.

WHY?

Perform an analysis of specific features of the PIM, check the behavior of the user and if the emotional impact is positive or negative.

TEXT ANALYSIS

Confidential content of the company.

Phase 1. First Analysis	- Context (from help center if possible) - Intended users - Theoretical structure & design (goals_analysis)
Phase 2. Descriptive Analysis	- First approach (questions) - Analysis of content. - Interaction (sequences of actions performed list)
Phase 3. Emotional Impact	- Miro Diagram (Product -> Emotion -> Behavior) - Analysis with Norman's three levels of design.

Context: technical context from the help center.

If needed, the general context is important to give context to everything. Context allows us to be clear with understanding and scoping the problem we are trying to solve as well as making sure we are communicating the right thing to the right audience.

Intended users: the users that are intended to use Software or particular features or functions of the Software, as described in the Specifications for such Software.

Theoretical structure & design (goals analysis): definition of how we would like theoretically the design to be and the general goals.

First approach (questions): questions made from the manager to answer. It is need to first do a general analysis, so the answers can be justified.

Analysis of content: general analysis of usability, layout design, etc.

Interaction: sequences of actions performed list to evaluate the flow.

Emotional impact: as a designer, you focus on users' needs in their interactions with your products or services. It's logical that the functionality you design should help them achieve their goals as efficiently and effectively as possible. But you also have to focus on their responses, which are naturally emotional. As rational as we may like to think we are, emotions are at the heart of how we interpret reality.

Miro Diagram (Product -> Emotion -> Behavior): evaluating the impact using the product-emotion cycle. It shows how we make emotional connections with a product. As we develop positive attachments through the cycle when interactions with them are appropriate.

Analysis with Norman's three levels of design: in the human mind there are numerous areas responsible for what we refer to as emotion; collectively, these regions comprise the emotional system. Don Norman proposes the emotional system consists of three different, yet interconnected levels, each of which influences our experience of the world in a particular way. The three levels are visceral, behavioral, and reflective.

WHAT?

Do specific case studies on Shortcut

WHY?

To do research, evaluate the user's perspective and perform an overall analysis.

TEXT ANALYSIS IN SHORTCUT

Confidential content of the company.

TEXT ANALYSIS IN SHORTCUT

Confidential content of the company.

Phase 1	- Summary
Phase 2	- Analysis - General - Of each escenario
Phase 3	- Related insights in Productboard
Phase 4	- Independent additional observations

To optimize the explanation of the stories and reconsider the scenarios. Also, to propose solutions if a scenario is missing

Summary: preview of the analysis will talk about.

Analysis: General: analysis of how the story is expressed and the subject | Of each escenario: same analysis about each scenario.

Related insights in Productboard: insights are patterns in the observations we make in the world. They give us an understanding of a specific cause and effect within a specific context. They help us explain our observations.

Independent additional observations: observations related to the topic or that I might make in the analysis process of the story.

Related insights in Productboard: <https://uxplanet.org/what-are-insights-aa1f2d1b3b9c>

WHAT?

First approach of a new feature to implement + document what the competition has + evaluate and compare their features + propose what our main features can be.

WHY?

To understand what we want, evaluate the basic requirements we need and have a first look of what we can really do.

Zainab Sep 13 2022, 1:29 pm

There are critical technical impediments in the system that we need first to evaluate.

	GOOGLE DRIVE	GMAIL	AKENEO	PIMCORE	IDEA

TEXT ANALYSIS IN SHORTCUT

Confidential content of the company.

Phase 1	- Problem statement - Suggestion of a scenario for the problem statement - Background info - Goals - Expected outcomes
Phase 2	- [Miro file]: documentation - competition - Diagram to see layout -> 3 or 4 examples (ex. see Google/platforms/other PIMs) - Screenshots of them - Comparison table
Phase 3	- Ideation - Design Flow - Creation of new scenarios
Phase 4	- Wireframing (low-fi)

This proposal outlines a problem and presents a solution that is justified with research and benchmarking

UX proposal: it is a written outline or plan of the upcoming UX design proposal that explains the problems and solutions of the project and the tools and strategies to be applied.

Problem statement: an actionable summary of your user, their goals, and what you need to solve to meet those goals. It sets the course for your project's user experience; however, it shouldn't include anything about the design elements or user functionality you might employ to solve the problem.

Suggestion of a scenario for the problem statement: to define the scope using the story's structure. It helps to define in less words what the statement is and it is available in case the team would want to create a new story.

Background info: basic technical information that might be critical to know before starting the project. Also, to know what resources we already have and if we could use them.

Goals: settle all the goals we want for our team, etc.

Expected outcomes: what we want to provide to the user.

[Miro file]: documentation - competition - Diagram to see layout -> 3 or 4 examples (ex. see Google/platforms/other PIMs): analysis of different flows, comparison of their main features on a table. + Visual references of them.

- Ideation: ideation is the third phase of the Design Thinking process, and it's all about generating ideas. Can be superficial or more in depth as design of the flow, general infrastructure, etc.

The creation of a new flow can also help to evaluate if there is any scenario that is missing from the story and check it again.

Wireframing (low-fi): a basic wireframe that outline blueprints for web pages or app screens. They help you communicate your product's "big idea" rather than the specific details.

UX proposal: <https://usabilitygeek.com/write-ux-proposal-how-to-guide/>

Problem statement:

<https://careerfoundry.com/en/blog/ux-design/problem-statement-ux/#:~:text=A%20problem%20statement%20is%20an,employ%20to%20solve%20the%20problem>

Ideation: <https://careerfoundry.com/en/blog/ux-design/what-is-ideation-in-design-thinking/>

Wireframing (low-fi): a basic wireframe that outline blueprints for web pages or app screens. They help you communicate your product's “big idea” rather than the specific details.

Ideation: <https://careerfoundry.com/en/blog/ux-design/what-is-ideation-in-design-thinking/>

Design Flow

Creation of new scenarios

Methods

Indication of the methods used

There is a long list of methods employed by UX. But at its center is the user and how they think, behave—their needs and motivations.

Typically, this is done through observation techniques, task analysis, and other feedback methodologies.

Monica

Monica is looking for better food options that match her busy life

Monica

Monica is looking for better food options that match her busy life.

Brief description

Monica is a 25 year old woman, who lives in Spain, she lives in a shared apartment with her best friend. She is vegetarian, loves animals and cares for the environment.

- **Monica's main job to be done is to keep herself healthy easily without harming anyone.**

EMPATHY MAP Example (Buying a TV)

Analysis

The Product-Emotion Cycle

Don Norman's 3 Levels of Emotional Design

Visceral

- Unconscious Attraction
- Feelings / Nostalgia
- Initial Impression

Behavioral

- Usability and functionality
- Performance
- Effectiveness of use

Analysis

Analysis

The plan that has already been chosen needs to trigger a positive feeling, but the possibilities of expansion need to trigger curiosity. In the actual display the “Free Plan” has a montgolfier icon and the “Pro Plan” has a rocket icon. Free is written in minuscules but the first letter. Yet pro is written in capital letters. Free has a smaller box that is not outlined. It doesn’t have an external shadow either, which makes it feel like it is in a layer underneath the pro plan box. And the ticks for each feature are in gray instead of green.

All of this is overall good regarding giving more importance to the pro plan. As it provides a more complete service. Also the pro has an action button to entice the discovery of the expansion opportunities.

To finish I like the lower link button “Nevermind, I don't want to change my plan”. It triggers a positive internal locus of control and improves the discovery experience. The non rational thought can be something like “Oh, there is no compromise. I have the right to look and see for myself with no surprises”.

And overall there are no comments about the clarity of the elements and their purpose. They have their place. The variety, meaning, quantity and placement of them are reasonable and useful.
